

# Disaster Recovery as a Service

Recover your IT in case of an emergency

In today's digital age, ensuring your business's operational continuity is crucial. Our Disaster Recovery as a Service (DRaaS) provides a comprehensive, cloud-based safeguard for your data and systems against interruptions or data loss.

Dustin DRaaS is your fully managed disaster recovery solution. In the event of unforeseen system downtime, it enables you to swiftly restore your entire IT environment. With just a few clicks, your critical virtualized servers can be relocated to an offsite data centre, ensuring your operations can continue uninterrupted.

The financial impact of unexpected downtime can be severe. However, with our Disaster Recovery service, you can quickly counter such incidents by restoring your IT operations in minutes when necessary. Our service is hosted in our own data centres, allowing you to establish dedicated connections for enhanced speed, low latency, and fail-safe redundancy.

Our DRaaS solution offers an alternative to maintaining secondary or tertiary data centres by providing continuous data protection. With the capability to revert a virtual machine to any point within 5-minute intervals, you can swiftly recover your applications in a secure environment, even in the aftermath of ransomware attacks.

## Business continuity

Maintain critical functions during and after a disaster.

## Easy to use

Free your IT staff from complex DR operations.

## Compliance

Ensure data protection and regulatory compliance.

## Simplify

Eliminate your secondary data room.

## Failover & failback

Easily recover entire sites within seconds and without disruption to your business. Move back when the problem is resolved.

## Test and Develop

Be able to spin up sandbox environments for test and development and upgrade validation, without slowing down production.

## Save cost

Lower your disaster recovery costs and only pay for actual consumption.

## Continuous Data Protection

Using always-on replication ensures the protection of changes to your applications as they occur. No more snapshots.

## Secure Your IT Now

Contact us to proactively secure your IT environment against unforeseen events. Our experts are ready to customize a DRaaS solution to match your operational scale and complexity.
