

Screw Beam into any light socket or use the included power cable to place Beam on a flat surface. You can control Beam with the remote app that is available for any Apple or Android smartphone/tablet.

Install any app available on Beam so you can watch Netflix or YouTube on a big screen (even on your bedroom ceiling while lying in bed). Or share your personal pictures and videos with your friends and family directly from your smartphone/tablet through Airplay and Miracast.

Beam.

The smart projector that fits in any light socket.

Beam can turn any flat surface into a big screen. It is a powerful projector equipped with a smart computer, all inside a beautifully designed casing.

winner 2016

You can tell Beam to do what you want it to do when something you define happens. Like: play a YouTube movie when someone comes home or even wake you up in the morning with the latest news and your agenda for the day.

Beam also has a normal dimmable light! You can switch between light and projection instantly by pressing the button on Beam or by using the Beam remote app. With the app you can even dim the light levels!
