

## Ducky Tinker 75 - Barebone

Take on the ultimate keyboard project with the Ducky ProjectD Tinker75 Barebone Keyboard. The keyboard for enthusiasts, the ProjectD Tinker75 requires full assembly, from backplate to bezel. Whilst no keycaps or switches are included, this barebones keyboard is equipped with hot-swapping technology and supports QMK/VIA functionality. Craft your perfect mechanical gaming keyboard.

### DUCKY PROJECTD TINKER75 BAREBONE:

- Complete barebones keyboard with assembly required
- Hot-swappable and QMK/VIA enabled
- 75% layout with gasket mounting for switches
- Premium materials to ensure high build quality
- Extensive manufacturing process for dynamic build
- Keycaps and switches are an additional purchase

### PREMIUM MATERIALS

For robust construction, the Ducky ProjectD Tinker75 Barebone Keyboard is manufactured from premium quality materials. Each layer has been carefully selected to provide a better typing experience whilst still offering customisation.

The casing is manufactured from durable ABS plastic, providing a solid frame to encase the rest of the components. Next, the baseplate is manufactured from FR-4, a laminate-grade glass epoxy. It is a versatile thermoset plastic that has a high stiffness to weight ratio. A rubber gasket is utilised for mounting switches. To cushion the switches as you type is a layer of Poron foam, providing a dampening effect to soften the click and exceptional typing feel.

## HOT-SWAPPABLE

The gasket mount facilitates incredible compatibility when it comes to installing switches into the Ducky ProjectD Tinker75. Plus, with the 5-pin hot-swappable PCB, you can change out your switches to craft a fine-tuned feedback for your needs. Plus, screw-in PCB stabilisers are included to prevent any wobble.

Adding a splash of colour, south-facing RGB LEDs are integrated into the design. Your keys will be beautifully backlit by vibrant lighting.

## SF FORM FACTOR

The Ducky ProjectD Tinker75 sports Ducky's SF (75%) form factor. This is a 75% sized TKL keyboard with a dedicated F-key row. Keys can be arranged in ISO layout.

The Ducky ProjectD Tinker75 Barebone Keyboard is available with a black top frame and white bottom frame, creating a stunning contrast for the foundation to your dream mechanical keyboard.

## SCOPE OF DELIVERY

The Ducky ProjectD Tinker75 Barebone Keyboard includes everything you need to engineer the perfect mechanical keyboard. This includes the inner materials, such as the gasket and bottom plate, as well as the outer aluminium casing. You assemble everything from the inner workings to the three-stage stand. The tools required for assembly are also included, such as a switch puller and keycap puller.
