

Usb 3.0 To Gigabit Ethernet Adapter - Wpd/wake-on-la

Data sheet

Summary

- ✓ Provides a wired Gigabit Ethernet link for devices without a built-in Ethernet port.
- ✓ Supports Wake-on-LAN for remote wake and maintenance tasks.
- ✓ Compact aluminium housing and short cable make it easy to carry and use at desks or on the go.
- ✓ Useful for video conferencing, large file transfers, and situations where Wi-Fi is unreliable.
- ✓ Note: Wake-on-LAN requires host support and some operating systems may need drivers.

Product description

Why choose this USB 3.0 to Gigabit Ethernet adapter?

Prokord USB 3.0 To Gigabit Ethernet Adapter - Wpd/wake-on-la gives you a stable wired network connection for laptops and tablets that lack an RJ45 port. It delivers gigabit-class throughput for file transfers and video calls, and includes Wake-on-LAN support to help with remote management and maintenance.

Prokord USB 3.0 To Gigabit Ethernet Adapter - Wpd/wake-on-la in short:

- Provides a wired Gigabit Ethernet link for devices without a built-in Ethernet port.
- Supports Wake-on-LAN for remote wake and maintenance tasks.
- Compact aluminium housing and short cable make it easy to carry and use at desks or on the go.
- Useful for video conferencing, large file transfers, and situations where Wi-Fi is unreliable.
- Note: Wake-on-LAN requires host support and some operating systems may need drivers.

What this adapter does

The Prokord adapter converts a USB connection to a Gigabit Ethernet port so you can plug directly into wired networks. It helps reduce latency and packet loss compared with wireless in crowded environments. The compact design fits into travel bags and docks easily at workstations. Wake-on-LAN and WPD compatibility make it suitable for remote administration and device provisioning when the host system supports those features.
