

RollerMouse Pro3 Family

Work more comfortably and smoother than ever before!

RollerMouse Pro3 Family - A true workhorse

The user-friendly computer mouse is now available with a modern twist. You can work efficiently and comfortably with high precision without getting tired since RollerMouse Pro3 and Pro3 plus will follow your natural arm and hand movements.

Comfortable position

Prevent and relieve stress injuries that can be caused by incorrect work positions in front of the computer. With a natural sitting position, where you rest your hands in front of your body, you reduce the stress all the way from your fingers to your neck and shoulders. The reduced effort allows you to take control of your work day with a new focus and work comfortably and efficiently.

Proven support

Now you can sit at the computer for long periods of time without pain in your neck, shoulders and back. This ergonomically designed mouse is thoroughly tested and suitable for anyone who works with a full-size keyboard or prefers a partly covered rollerbar. The narrow palm rest works well both in small workplaces and in combination with a separate forearm support.

Small details - big difference

Increase your workflow without working more! With smart features such as copy/paste and double-click easily accessible you can work quickly with small movements. Take your needs into consideration and adjust the click resistance and cursor speed. The strategic location of the roller bar makes it easy for you to point and click. Soon you will be working faster, more comfortably and smoother than ever before!

Increased efficiency and support

The extra deep palm rest is the perfect complement to your standard keyboard. Providing relief during long hours in front of the screen, it helps you save energy and minimize exertion with every motion. This is especially noticeable if you have tasks with repetitive motions.
