Hotkey Commands

Hotkey commands are keystroke sequences that initiate computer/device functions. Hotkeys commands can be used to initiate KVM Switch functions. A hotkey command sequence must be initiated by the HK_LCode, followed by 1-2 additional keystrokes. Successful hotkey command inputs result in a high-pitch beep. Unsuccessful hotkey command inputs result in a low-pitched beep.

Notes:

- All keystroke combinations must be entered in rapid succession.
- Press and release the indicated keys, unless otherwise specified.

HK_LCode

Option 1 (Default)

- Left-side **Ctrl** + left-side **Ctrl**

Option 2

- Hold left-side **Shift** + **Num Lock** + **Num Lock** + release **Shift**
