# Introduction

The D-Link DWP-1010 5G/LTE Outdoor CPE is an easy-to-deploy, high performance 5G LTE router. It features a Gigabit Ethernet port (PoE) and 5G LTE mobile broadband for maximum reliability and mobility for intense Internet applications in remote areas in lieu of cable and DSL connections. Rugged design and flexible deployment options make the DWP-1010 ideal for both large-scale and last-mile deployments.

Establish your high-speed 5G LTE mobile service with the DWP-1010 by installing a SIM card and enjoy fast downlink speeds of up to 4Gbps<sup>1</sup> and uplink speeds up to 620Mbps<sup>1</sup>, giving the speed you need for fast, responsive triple-play services.

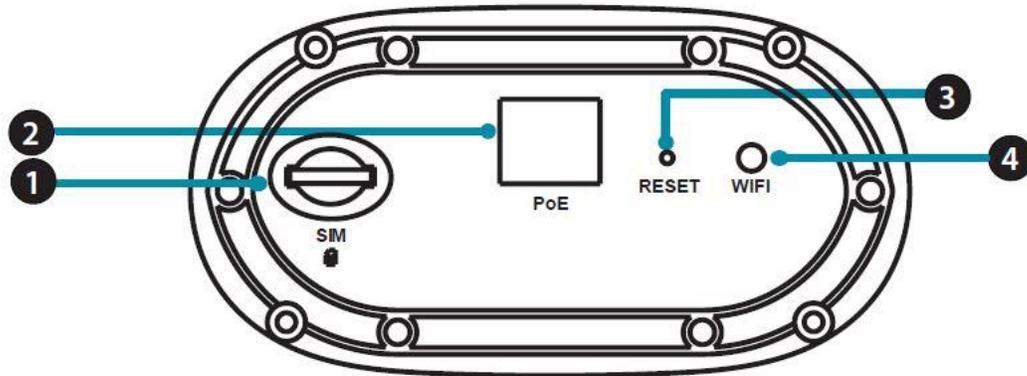

The industrial-grade casing means that the DWP-1010 provides reliable high-speed connectivity in extreme conditions. Compliant with IP67 enclosure rating, the weather resistant housing helps protect it from dirt and rain. Pole mounting and sturdy brackets allow the device to be installed virtually anywhere for optimal connectivity, giving you the freedom to install it right where signal is strongest.

The DWP-1010 features built-in 4kV surge protection on its PoE Ethernet port and requires no external surge protection devices. The enclosure is also able to resist direct static discharges of up to 4 kV. This effectively protects the device against sudden electrical surges caused by events such as lightning strikes or unstable electrical current. This protection significantly reduces the chance of equipment being damaged by electrical surges, and effectively lowers maintenance costs by minimizing the need for expensive equipment repairs or replacement.

<sup>1</sup> Data rates are theoretical. Data transfer rate depends on network capacity, signal strength, and environmental factors.

# Installation

## Connecting the SIM Card

1. Remove the four screws on the bottom of DWP-1010 to remove the protective base.

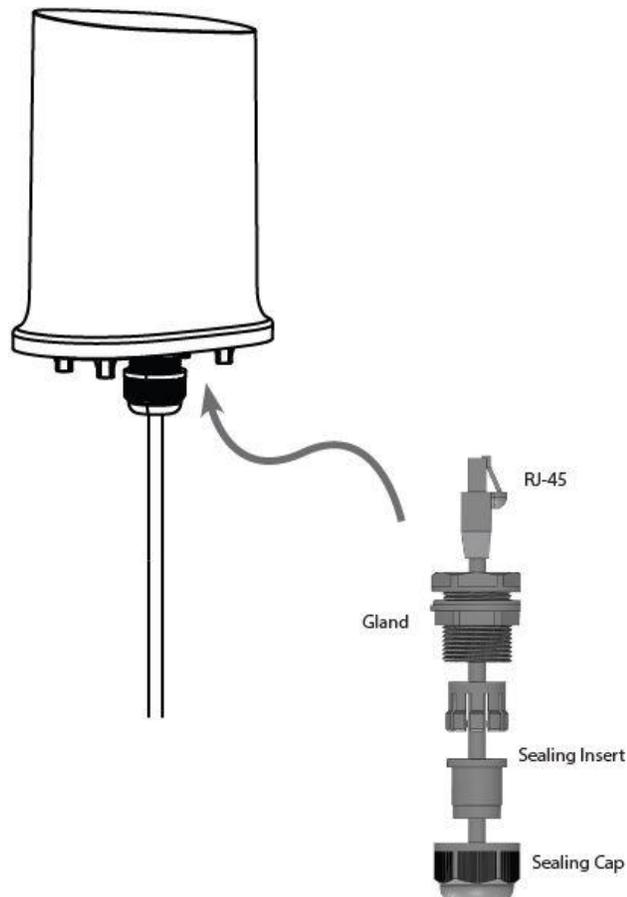

2. Remove the six screws around the water-resistant component. Insert the SIM card according to the orientation label on the device.

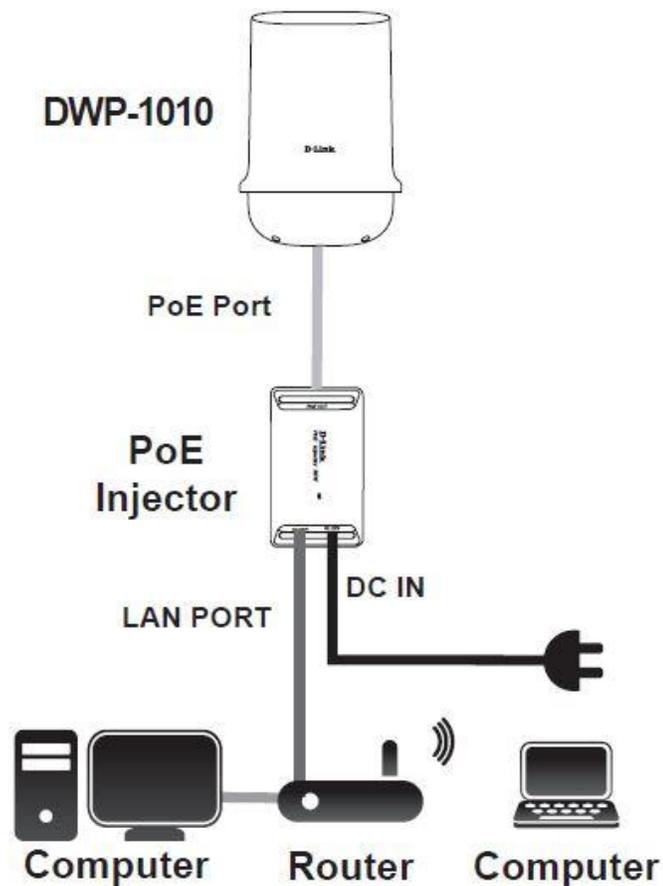

## Connecting an Ethernet Cable

1. Separate the sealing cap and sealing insert of the waterproof connector.
2. Insert the RJ-45 connector to the PoE port by threading an Ethernet cable through gland > sealing insert > sealing cap.
3. Place the water-resistant component back to DWP-1010.
4. Attach the sealing insert to the gland and make sure the assembly is fixed on the bottom of the water-resistant component.
5. Attach the sealing cap and tighten until snug.
6. Secure the water-resistant component with six (M2.5x6 mm) screws. Position it as the arrow indicated. (The arrow is located on the bottom.)
7. Thread the RJ-45 cable through the protective base.
8. Reinstall the protective base with the four (M3x4 mm) screws. (Skip this step if you're using a wall mount)

## Connecting to Your Network

1. Connect the Ethernet cable from the DWP-1010 to the “PoE” port of the PoE Injector.
2. Connect an Ethernet cable from a router/switch to the “LAN” port of the PoE Injector.
3. Attach the power cable to the power socket of the PoE Injector and plug the other end of the cable into an electrical outlet.

## Maintenance Notice

### Warning

**Attention**

- Only use the power cable that comes with the package.
- Over voltage is dangerous and may damage the product.
- Do not open or repair the case yourself. If the product is too hot, turn off the power immediately and have it repaired at a qualified service center.

### Hot Surface Caution

**CAUTION:** The surface temperature of the enclosure can be very high. Especially after operating for an extended period of time, or when installed in an enclosed space without air circulation, or in a high ambient temperature location.

**DO NOT** touch the surface while servicing.

# Configuration

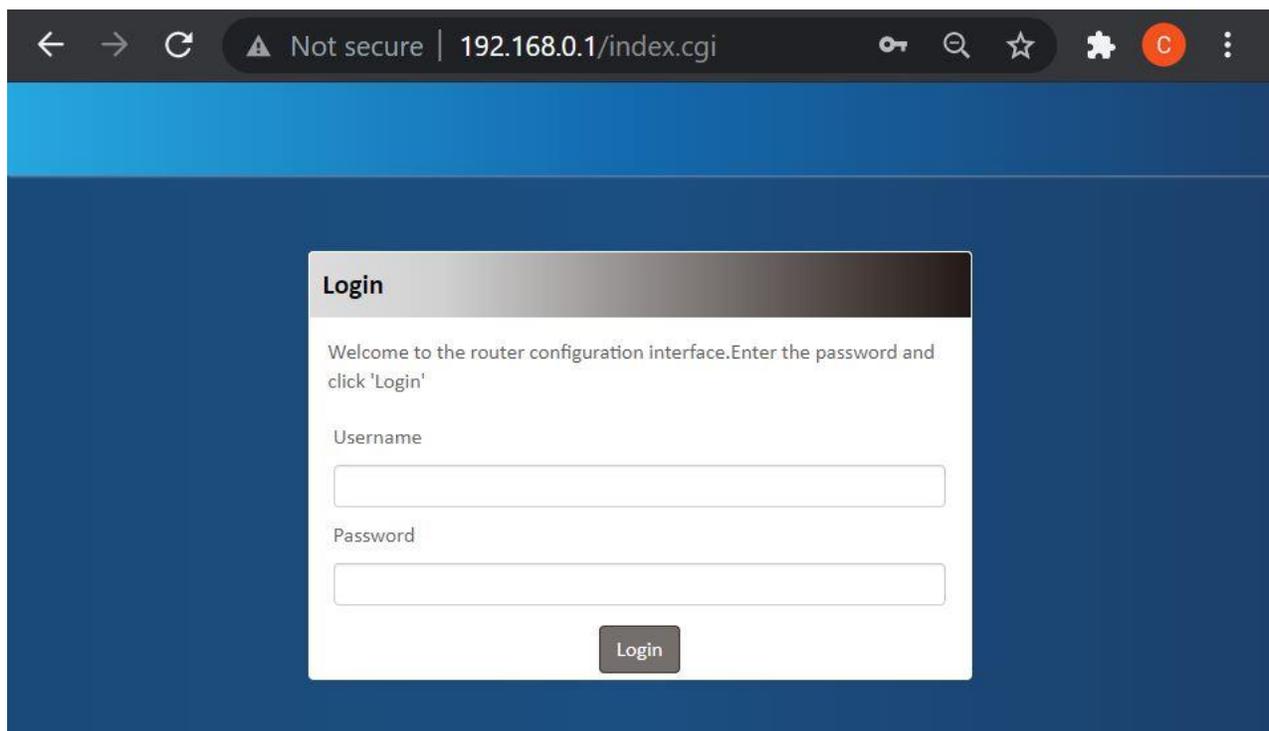

## Getting Started

To access the configuration utility, open a web browser such as Internet Explorer and enter the address of the router (**192.168.100.1** by default).

To log in to the configuration utility, enter the default username **admin** and the default 6-digit password printed on the Quick Installation Guide.

### Notes:

1. If you get a **Page Cannot be Displayed** error, please refer to the Troubleshooting section for assistance.
2. If you failed the login attempt for 3 times, you will be temporarily locked before log in fields are available again.

If this is the first time logging into the device, the system will prompt you to set a new password. Note that the password must be at least 10 characters and contain a mix of letters and numbers.

If you lose or forget the admin password, the **ONLY** remedy is to recover the device to its factory default settings by long pressing the Reset button. The reset procedure will erase the entire device configuration.

### Change Password

For security consideration, you are being asked to change the password, while the first time login to the device.

Enter the new password below.

(NOTE: The password must be at least 10 characters long, and must contain at least 1 English letter and 1 number. The password cannot be the same as the login account.)
