XL2410T LED Monitor

BenQ

Enjoyment Matters

FPS Mode

BenQ's team worked with HeatoN and SpawN to develop a display mode attuned to the needs of shooter game aficionados. The aim was to create a display mode that provides gamers with a totally accurate representation of each scene in a virtual world so they're never put at a disadvantage in a key encounter with the enemy because of hardware shortcomings. There are also two user-configurable modes that let gamers set and save the exact brightness, contrast, sharpness, and Red/Green/Blue color tint that they prefer and that let them be at their best in a pitched battle with a crafty enemy.

Display Modes

The display mode hotkey makes changing the size of the screen content as simple and quick as a button press. Instantly switch among 17", 19", 19" widescreen, and 22" widescreen formats so you get the best possible view of whatever you happen to be watching. You can also take advantage of the Smart-Scaling button, added especially for the benefit of gamers. You can adjust the size of the screen content until your avatar's actions precisely correspond to your expectations based on your control movements, so you can perform with peak effectiveness.

NVIDIA 3D Ready

Already certified as NVIDIA® 3D Vision™-ready, the XL2410T is able to handle the most action-packed graphics-intensive 3D games or movies without missing a beat, enabling you to experience their virtual worlds with total realism.

Speed

120Hz Refresh Rate

With a screen image that's redrawn 120 times every single second, there's never a lag between what's happening in the virtual world of your favorite game and what you actually see on screen. Drawing on hyper-speed video processing technology, the XL2410T gives on-screen action a captivating realism. You can spot your opponents the instant they make their move, and track their movements accurately, so victory or defeat always comes down to your skill and not a sluggish display that leaves you frustrated.

60-75Hz

120Hz

2ms GTG

A super-short response time means both fast-moving action and dramatic transitions are rendered cleanly, without the smearing or ghosting that's not only annoying but can affect your performance when a millisecond can make the difference between a successful sneak attack and a strike that ends in failure.

Other Monitors

BenQ XL2410T

Picture-by-Picture

The Picture-by-Picture (PBP) display mode provides side-by-side display of video from two independent video sources. It supports a variety of interfaces—including D-sub, DVI, and HDMI. Enjoy simultaneous views of a game and a website or a movie. PBP is an easy way to double your fun.

ZOWIE EC Series Gaming Mouse & SWIFT Gaming Mouse Pad

ZOWIE Bundle

BenQ is also working with famed competitive gaming equipment manufacturer ZOWIE on gear like the ZOWIE EC Series Gaming Mouse and SWIFT Gaming Mouse Pad.

Design

An understated toughness that keeps the focus where it should be. Tailor the height, tilt, pivot, stroke and swivel adjustment to perfectly fit each individual user!
