UTM Security Subscriptions

FOR DEFENSE-IN-DEPTH AGAINST NETWORK THREATS

APT Blocker*

APT Blocker uses a cloud-based sandbox with full system emulation to detect and block advanced malware and zero day attacks.

- Recognize malicious zero day threats that cannot be detected by anti-virus software alone.
- Closely integrated with WatchGuard Dimension™ to provide logs, proactive alerts, and full visibility into why a file is detected as malware.

DATA LOSS PREVENTION (DLP)*

The DLP subscription prevents data breaches by scanning text and common file types in email, web, and FTP traffic to detect sensitive information attempting to exit the network.

- A built-in library of over 200 rules allows IT to quickly create and update corporate DLP policies.
- Built-in sensors are included for PCI DSS and HIPAA compliance mandates.

APPLICATION CONTROL

Application Control has become an essential component of next-generation security. It protects the network and keeps users on the tasks that matter by blocking unproductive and inappropriate apps.

- Gain control over 2,000 web and business applications, using more than 2,500 unique signatures.
- Have complete visibility into applications used, with intuitive monitoring and reporting capabilities.
- Control usage of applications by category, application, or application sub-functions.

INTRUSION PREVENTION SERVICE (IPS)

By adding an IPS subscription, your network gains in-line protection from attacks, including buffer overflows, SQL injections, and cross-site scripting attacks.

- All ports and protocols are scanned to block network, application, and protocol-based attacks.
- Dynamically block IP addresses that have been positively identified as the source of an attack.

WEBBLOCKER

URL and content filtering to control access to sites that host objectionable material or pose network security risks, including known spyware, phishing, and botnet command and control sites.

- Configure over 130 web categories to stop the sites and web tools you most want to block, and enable access by user, group, domain, and need for maximum flexibility
- URL database is hosted in the cloud to simplify setup and administration (or choose local install).

GATEWAY ANTIVIRUS

Scans traffic on all major protocols to stop threats before they can gain access to your servers and execute their dangerous payloads.

- Heuristic analysis identifies viruses and dangerous code that signatures can't catch.
- Decompresses and scans all common formats and multiple layers of compression.

REPUTATION ENABLED DEFENSE

WatchGuard UTM is the only unified threat management system on the market that includes a powerful, cloud-based reputation lookup service to ensure faster, safer web surfing.

- Continuous updates keep current with dynamic web content and changing web conditions.
- Up to 50% of URL scanning can be skipped without compromising security, resulting in faster browsing times and greater throughput at the gateway.

SPAMBLOCKER

Rely on spamBlocker's industry-leading Recurrent Pattern Detection (RPD™) technology to detect spam outbreaks as they emerge for immediate, continuous protection from unwanted and dangerous email.

- Block spam regardless of language, format, or content of the message – even image-based spam.
- RPD identifies and blocks viral payloads for an additional layer of real-time anti-virus protection.

APT Blocker and DLP subscriptions are not included in the UTM Security Suite. They are available for all WatchGuard firewall models as an upgrade.
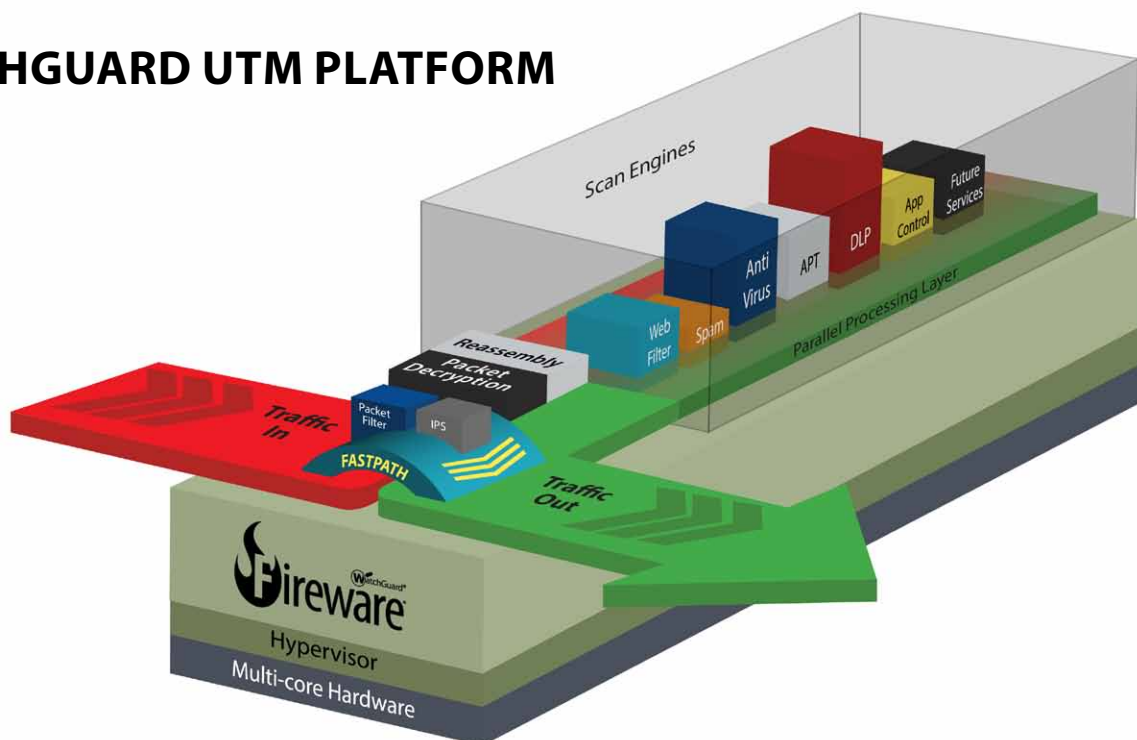

AVAILABLE FOR ALL UTM SOLUTIONS

WatchGuard offers eight UTM (unified threat management) security subscriptions for its family of UTM solutions so businesses can layer on protection where they need it most. These services complement the built-in defenses of your WatchGuard firewall, boosting protection in critical attack areas, including assaults from spyware, spam, viruses, trojans, web exploits, and blended threats.

" Why move to another appliance when the one we have has **everything we need and more.**

Gary Lovelock
IT Manager

WATCHGUARD UTM PLATFORM

Flexible architecture blocks network threats while optimizing performance

WatchGuard's UTM (unified threat management) platform is designed to allow network traffic to pass through a full suite of UTM services—from anti-spam protection to Data Loss Prevention—at top performance levels. Leveraging the power of multi-core processing, the platform runs all scanning engines simultaneously for maximum protection and blazing fast throughput. Resources are allocated based on the flow of data and the security services that data requires. For example, if web filtering needs more horsepower, additional processors are automatically applied so web traffic keeps moving and your business stays secure.

MANAGING SUBSCRIPTIONS IS EASY

All security functionality on your WatchGuard Firebox or XTM solution, including UTM subscriptions, can be managed from a single intuitive console.

KNOW WHAT'S HAPPENING ON YOUR NETWORK AT ALL TIMES

- Any security activity identified by a service is logged and stored for easy reporting so you can take immediate preventive or corrective action.
- All management tools, including rich reporting and monitoring, are included with your WatchGuard firewall purchase. There is no additional hardware or software to buy.

HOW TO PURCHASE

WatchGuard security services are available in single and multi-year subscriptions. Contact your local authorized WatchGuard reseller for more information on how to add best-of-breed defenses to your WatchGuard appliance, including bundled services and special promotions.

BEST-OF-BREED UTM

WatchGuard uses a best-of-breed strategy to create the most reliable security solutions on the market. By partnering with industry-leading technology vendors, WatchGuard delivers an all-star family of UTM network security products.

- **AVG**—A consistently high performer in independent Virus Bulletin testing provides the engine for Gateway AntiVirus.
- **Cyren**—Patented RPD® technology in the Cloud provides spamBlocker with the only effective anti-spam solution for low footprint UTM appliances. Up to 4 billion messages per day reviewed.
- **Websense**—Supplies the cloud-based URL database for WebBlocker. Security coverage is supplemented by Websense Security Labs and their ThreatSeeker Network.
- **Trend Micro**—Leading provider of IPS and Application signatures, delivering comprehensive protection against the latest threats.
- **Sophos**—Leading provider of email and endpoint security, including DLP, for enterprises worldwide.
- **Lastline**—provides the cloud-based sandbox analysis and advanced evasion detection that powers WatchGuard APT Blocker.
