More beautiful images faster with Nikon's latest image processing engine

The latest evolution of Nikon's EXPEED C2 image processing engine features enhanced performance that yields a yet higher level of image quality. A dramatic increase in the speed of noise reduction processing enables greater resolving capability. In addition, the engine's ability to predetermine the presence of noise specific to any given sensitivity level accelerates the speed with which processing can be performed. This enables precise noise reduction for edges and throughout the image that produces clear, sharp results for maximum image quality.

Maximized performance and streamlined workflow

Instant start-up and improved AF speed combine with a shorter shutter release time lag to optimize all system operations so they keep you ahead of the action. In addition, the increased speed of switching between functions and support for SDXC memory cards improve the response in operating workflow for more liberating, stress-free camera operation.

Outstanding flexibility and control

Further enhancing usability is a 7.5 cm (3-in.) vari-angle 921k-dot high-resolution Clear color display that can be tilted to enable more flexible shooting in a wide range of applications. Front and rear command dials offer control over settings without removing your hands from the grip.

Special effects enable greater artistic expression

Defocus during exposure

Zoom exposure

Cross process

Enhance your images with a variety of Special effects that are easy to set while shooting. Choose from the 'Zoom exposure' and 'Defocus during exposure' mechanical processes, or Special effects modes that include Soft, Nostalgic sepia, High-contrast monochrome, High key, Low key, Selective color, Creative monochrome, and Painting. In-camera Filter effects also available let you apply similar Soft, Selective color, Cross screen, Fisheye, Miniature effect, and Painting to shots already taken.

720p HD movie recording with stereo sound

HDMI connectivity (HDMI cable available separately)

Other features

- Virtual horizon display
- Enhanced NRW (RAW) file format support
- Zoom memory (Quick switching between seven preset focal lengths)
- Tone level information for quick and precise image adjustment
- Versatile Exposure and White balance bracketing functions
- Optional WC-E75A Wide-angle Converter Lens
